Time is the essence ...

... for ^{18}F labeling. The poor reactivity of aqueous fluoride ions has long been a challenge in ^{18}F labeling. In their Communication on page 11876 ff., D. M. Perrin et al. present trifluoroborate-peptide conjugates that are labeled by isotopic exchange in water within 15 minutes to provide ^{18}F tracers with high specific activity. Time-consuming HPLC can be avoided. Several bioactive ligands enable PET imaging of in vivo targets.
